**Heartworm 4Dx Lyme/
Ehrlichia/Anaplasma Test**

Performed ☒

Declined ☐

Declined labwork at this time

Recommendations:

1. Sparky might feel a bit lethargic today and tomorrow from the immunizations. If you note multiple episodes of vomiting, profound weakness, facial swelling, and/or hives, these are NOT normal post vaccine reactions, and you should call us ASAP. If we are closed, please contact MedVet at 561-0069 or the CARE CENTER at 530-0911.

2. Sparky is in good general health and is now current on an annual physical exam and immunizations.

3. We do recommend annual bloodwork on our pets who are 7 years and older to screen their internal function. This helps to uncover any changes internally that our pets are not showing outward clinical signs.

4. Sparky would greatly benefit from a dental procedure with a tooth extraction. A proper dental cleaning and assessment requires your pet to be under general anesthesia. This facilitates a thorough cleaning, oral/dental exam, radiographs (x-rays), and extractions/oral surgery, the need for which may be revealed during the procedure. Please call us if you have any questions or if you would like to schedule this procedure. If this procedure is scheduled within 30 days of this recommendation, you will receive a 15% discount off of the dental procedure (this discount excludes Paw Pack members as the dental procedure is already discounted at 25%-30% within the package price.)

5. For parasite control, we recommend a combination of the following products be given life-long:

- Interceptor Plus - oral tablet given monthly, year round for heartworm and intestinal parasite prevention
- OR
- Proheart 12 - injection given once a year for heartworm and common intestinal parasite prevention

IN COMBINATION WITH

- Simparica - oral tablet given monthly, year round for flea, and tick prevention
- OR
- Seresto - collar, eight month duration, year round for flea, and tick prevention
- OR

SINGLE MONTHLY PILL

- Simparica TRIO - oral tablet given monthly, year round for heartworm, flea, and tick prevention.

6. We are sad to see you leave, but understand wanting a shorter drive to the veterinary office! Best wishes and feel free to reach out with any questions or concerns. Take care!

Thank you for entrusting Sparky to our care.
Sincerely,

Account #: 17904

DOB: 5/18/2017
Age: 6 Yrs. 9 Mos.
Weight: 84.1 pounds

History: Sparky presented for abdominal ultrasound to investigate cause of markedly elevated ALP. She is doing well at home. Mobility is better since starting Gabapentin, will need refill. No vomiting or diarrhea. Switched to a weight management diet and Sparky is not finishing all of it.

Age: 6 Yrs. 9 Mos.

Wt: 84.1 lbs

Sparky nervous about being on her back. Able to perform about 1/2 ultrasound before she became stressed. Spoke with Lindsay to request given Sparky some Buprenorphine to help calm her so ultrasound could be completed. She is ok with all. rgk

Administered Buprenorphine 0.82 ml (0.6 mg/ml) with rinse of Acepromazine IM right lumbar epaxials

Service Provided:

Abdominal ultrasound- images pending to specialist

Dispensed:

Gabapentin 300mg Capsule	Give 1 capsule by mouth every 8- 12 hours, as needed, for pain	60.00
--------------------------	--	-------

Recommendations:

Sparky may be a little sleepy for the next several hours due to the Buprenorphine. Please ensure that she is not near stairs or any place that she could fall and hurt herself. She should be back to normal by tomorrow.

Sparky has some sludge in her gall bladder, with a possible stone in the gall bladder. There were some mild changes throughout the liver, as well. I should receive the ultrasound report in 1- 2 days and will email a discussion of those results.

Thank you for entrusting Sparky to our care. Dr. Kivircik

Comprehensive Physical Exam

2/9/2024

History: Sparky presented for evaluation of hindlimb issues. She was diagnosed with a left CCL tear in April 2022. For the last year, she has also been having issues with her right rear leg, as well. Lindsay is saving up for a bilateral cruciate repair but would like to start a pain management program in the mean time. Sparky has difficulty getting up from a sitting position and she will hop sometimes when walking or running.

Current medications: TRIO

Diet: Beneful beef and rice (1 cup BID) with added water or chicken broth

Objective:	No Significant Findings	Abnormal	Did Not Examine	Comments
Abdomen	☒	☐	☐	No obvious masses, organomegaly noted. Difficult to perform deep palpation due to her weight
Attitude	☒	☐	☐	Bright, alert, and responsive. Sweet girl
Cardiovascular	☒	☐	☐	No murmur or abnormal rhythm ausculted
Ears	☒	☐	☐	
Eyes	☒	☐	☐	
Gastrointestinal	☒	☐	☐	
Mouth / Teeth	☐	☒	☐	Tartar- mild
Membranes/Nodes	☒	☐	☐	
Musculoskeletal	☐	☒	☐	Obese Bilateral CCL tears, decreased muscle mass over hindlimbs. Pronounced medial buttress L stifle
Nervous System	☒	☐	☐	
Respiratory	☒	☐	☐	Lungs auscult clear all fields

Handouts on Adequan and Librela

Gabapentin 300mg Capsule	Give 1 capsule by mouth every 8- 12 hours, as needed, for pain	60.00
--------------------------	--	-------

Urine container for owner to drop off first of the morning urine sample for Urine Cortisol: Creatinine ratio

Recommendations:

1. Sparky's ALP value is significantly elevated.

As we discussed, the high ALP levels can indicate issues within the liver, gall bladder, or biliary tree. We can also see elevations with endocrine diseases like Cushing's.

Given her CCL issues and the need for surgery, it's particularly important that we rule in/ rule out Cushing's disease as a cause for this blood work change. Cushing's disease can significantly negatively affect the body's ability to heal due to high circulating cortisol levels. As such, no surgeon would be willing to operate unless Cushing's could be ruled out.

Please collect a first urine sample of the morning, as this will be the most concentrated sample of the day. If you cannot bring it in right away, please put in fridge until you can get it to us. The sample must be submitted within 24 hours of voiding.

If the urine test suggests Cushing's disease, we will discuss a follow-up confirmatory test.

If it helps rule out Cushing's, a repeat abdominal ultrasound will be recommended.

2. We are sending home Gabapentin for Sparky to help with her discomfort. Please use as directed. The Gabapentin may cause drowsiness. If this is excessive, please let me know.

B:Billing, C:Med note, CB:Call back, CK:Check-in, CM:Communications, D:Diagnosis, DH:Declined to history, E:Examination, ES:Estimates, I:Departing instr, L:Lab result, M:Image cases, P:Prescription, PA:PVL Accepted, PB:problems, PP:PVL Performed, PR:PVL Recommended, R:Correspondence, T:Images, TC:Tentative medl note, V:Vital signs

3. Since Sparky's ALT (liver leakage enzyme) is mildly elevated, we decided to forgo Carprofen and consider using Galliprant instead as it is easier on the liver. If you decide you want to try this, we can order it through our online pharmacy, or call it in to Costco for you.

4. Other options for addressing discomfort due to arthritis are:

- Weight loss- I recommend decreasing Sparky's food intake to 1 and 1/2 MEASURED cups per day. You can add a can of green beans to her meals to help replace what was taken away in kibble. This will help her feel more full so she accepts the diet more easily.

If after a few months you see no change in her weight, I'd recommend assessing her for low thyroid hormone levels.

- Dasuquin joint supplements daily

- Adequan injections- These are given twice weekly for 4 weeks and then once every 2- 4 weeks depending on her level of comfort. The cost for injections will be \$58 per injection.

- Librela- These are given once a month. Typically, we expect to see improvement after the second monthly injection. The cost for the first 2 injections is \$187; subsequent injections will be \$107 per injection.

Thank you for entrusting Sparky to our care.

Item Description	Quantity	Directions
Mometamax/Malmetazone 15g Ointment	1.00	Apply 3-4 drops (enough to coat the ear canal) to each ear once daily once daily for 7 days. Treatment for bacterial ear infection.
CeraSoothe Ear Cleanser 8 oz.	1.00	Gently clean the ears once daily for 7 days. Wipe clean and dry before applying ear medication.

Recommendations:

Ear infections are very common. To determine the cause of the ear infection we perform an in-house ear cytology with a microscope. Many ear infections are uncomplicated yeast infections that respond well to thorough ear cleaning and an ear medication. There are also more complicated infections that are caused by resistant bacteria or have an underlying allergy component that must also be addressed. These types of infections can take several rounds of treatment and may require more specific testing. Sparky has a mild bacterial ear infection today.

I have prescribed an ear cleaner and an ear medication. Please follow the ear cleaning tips listed below as you treat the ears at home for the next week.

Tips for ear cleaning:

- A. Hold the ear flap out and fill the ear canal with ear cleaner. Tipping the head to the side can help prevent the ear cleaner from spilling out.
- B. Massage the base of the cleaner-filled ear canal to work debris up and out of the ear.
- C. Use a non-woven gauze square or washcloth to remove the larger pieces of debris.
- D. Cotton-tipped swabs should be used carefully and only on the parts of the ear that you can see. Make sure that there is no cotton being left behind in the ear. Do not use cotton balls.
- E. (If an ear medication has been prescribed) Apply enough of the ear ointment to cover the surfaces of the ear canal. Again, massage the ear canal to work the medication in. You may wipe some of the

Wt: 80.2 lbs

Service Provided: Abdominal ultrasound - no abnormalities of liver noted. Sparky was anxious and panting heavily, image quality not good enough to send to Sonopath. Informed owner, advise that due to mild elevation of liver values and subjectively normal ultrasound, recommend rechecking NSAID panel in 2-3 months.

Tech: Dr. DeNuzio

Thank you for entrusting Sparky to our care.

12/19/2022 L 14

Immunoassay results from IDEXX VetLab In-clinic
 Laboratory Requisition ID: 43598 Posted
 Final

Test	Result	Reference Range
TT4 =	2.4 ug/dL	1.0 - 4.0

 Diagnostic Interpretation for TT4 < 1.0 ug/dL
 Low 1.0 - 2.0 ug/dL Low Normal 1.0 - 4.0 ug/dL
 Normal > 4.0 ug/dL High 2.1 - 5.4 ug/dL
 Therapeutic Dogs with no clinical signs of
 hypothyroidism and results within the normal reference
 range are likely euthyroid. Dogs with low T4
 concentrations may be hypothyroid or "euthyroid sick".
 Occasionally, hypothyroid dogs can have T4
 concentrations that are low normal. Dogs with clinical
 signs of hypothyroidism and low or low normal T4
 concentrations may be evaluated further by submission
 of freeT4 (fT4) and canine TSH. A high T4 concentration
 in a clinically normal dog is likely a variation of
 normal; however elevations may occur secondary to
 thyroid auto antibodies or rarely thyroid neoplasia.
 For dogs on thyroid supplement, acceptable 4-6 hour
 post pill total T4 concentrations generally fall within
 the higher end or slightly above the reference range.

Comprehensive Annual Exam and Immunizations

History: Sparky presented today for an NSAID panel and to update immunizations. She is doing well at home.

- Is your dog on Heartworm Prevention monthly? No
- Which Heartworm Preventative and Flea/Tick Preventative do you use? None right now
- What type of food are you feeding your dog? Canidae
- Will your dog go to daycare, boarding, grooming, dog parks or other such facilities? No
- Are there any issues you would like addressed by the doctor today? None
- What medications is your pet currently taking? None

Dispensed:

Item Description	Quantity	Directions
TRIO 44.1-88lbs EACH	1.00	Give 1 tablet orally once monthly YEAR ROUND for the prevention of Heartworms, Intestinal Parasites, Fleas, and Ticks.

Recommendations:

1. Sparky might feel a bit lethargic today and tomorrow from the immunizations. If you note multiple episodes of vomiting, profound weakness, facial swelling, and/or hives, these are NOT normal post vaccine reactions, and you should call us ASAP. If we are closed, please contact MedVet at 561-0069 or the CARE CENTER at 530-0911.
2. Sparky is in good general health and is now current on an annual physical exam and immunizations.
3. We do recommend annual bloodwork on our pets who are 7 years and older to screen their internal function. This helps to uncover any changes internally that our pets are not showing outward clinical signs.
4. Sparky would greatly benefit from a dental procedure. A proper dental cleaning and assessment requires your pet to be under general anesthesia. This facilitates a thorough cleaning, oral/dental exam, radiographs (x-rays), and extractions/oral surgery, the need for which may be revealed during the procedure. We will provide a dental estimate within the next 48-72 hours. However, predicting the extent of dental disease prior to the procedure is nearly impossible. As such, please note the second page of the estimate where the cost of extractions/oral surgery is explained - this is based on the length of time it takes the surgeon. Please call us if you have any questions or if you would like to schedule this procedure. If this procedure is scheduled within 30 days of this recommendation, you will receive a 15% discount off of the dental procedure (this discount excludes Paw Pack members as the dental procedure is already discounted at 17%-21% within the package price.)

NSAID panel IH

lab

Elevated ALKP (a liver value) This value normal goes up to 212 and was over 600, today. This value can indicate that things aren't moving through the liver and gall bladder system as well as they should be. This value can also rise a bit with stress. Certain disease conditions can also cause this. As we discussed in our phone call today, next steps would include imaging of the liver and gall bladder, possibly doing further testing to determine the underlying cause of this elevation, etc. At this time, you have elected to monitor this value and will perform the low dose Carprofen trial. There is some risk associated with using the Carprofen with a liver enzyme elevation. If you'd like to discuss this further, please let me know.

Services Provided:

Trimmed nails

OR

- Proheart 12- injection, once a year for heartworm and common intestinal parasite prevention

IN COMBINATION WITH

- Simparica- oral tablet, monthly, year round for flea and tick prevention

OR

- Seresto- collar, eight month duration, year round for flea and tick prevention.

SINGLE MONTHLY PILL

- Simparica Trio- oral tablet, monthly, year round for heartworm, flea, and tick prevention.

5. Let's work on weight loss with Sparky. We discussed feeding her twice daily and limiting her amount of food and treats. We discussed reducing her intake by 20%. If you have questions about this, please call.

6. We elected to start a low dose NSAID trial to help ease some of the pain and inflammation associated with her likely torn ACL ligament of her left rear leg. Radiographs of the rear legs, potentially pursuing surgical correction, etc. were all things that we discussed today. Let me know how I can help and if you have any questions.

Take care!

Thank you for entrusting Sparky to our care.

Item Description

TRIO 44.1-88lbs EACH

Quantity Directions

1.00 Give 1 tablet orally once monthly YEAR ROUND for the prevention of Heartworms, intestinal parasites, Fleas, and Ticks.

Item Description

Carprofen 75mg Tabs

Quantity Directions

60.00 Give 1 tablet by mouth every 12 hours as needed for pain and inflammation. Give with food. Stop if vomiting or diarrhea occur.

Recommendations:

1. Sparky might feel a bit lethargic today and tomorrow from the immunizations. If you note multiple episodes of vomiting, profound weakness, facial swelling, and/or hives, these are NOT normal post vaccine reactions, and you should call us ASAP. If we are closed, please contact MedVet at 561-0069 or the CARE CENTER at 530-0911.

2. I suspect that there may be a tear in the cranial cruciate ligament (CCL) in the knee. This is the same ligament often torn by human athletes (ACL). To confirm rupture of the cruciate ligament sedation and x-ray are needed. Sedation allows us to fully manipulate the joints and bones in the leg without resistance. In dogs, surgical stabilization is recommended to reduce pain and support the knee. We have elected to start with medical management. This includes weight management and anti-inflammatory medication. I also recommend preventing excessive hard play and running.

3. I recommend monitoring daily calorie intake closely. In the long run, excess weight can be detrimental to your pets overall health. Weight management can be challenging. I recommend initially reducing/eliminating human foods and treats. The next step may be to reduce the amount of dog food offered each day. If weight continues to be a problem we may switch to a calorie-restricted diet. Please let me know if you have any questions about diet and weight management.

4. Rupture of the cruciate ligament generally causes arthritis over time. Pets with arthritis may not be able to walk as far,

may have difficulty on stairs and smooth surfaces, and may have difficulty resting comfortably. I recommend starting most middle aged dogs (especially large breeds) on a glucosamine supplement to support joint health. There are many products on the market but I recommend trying one of these options: Dasuquin, Synovi G, Glycoflex Chews

5. For parasite control, we recommend the following products be given life-long:

SINGLE MONTHLY PILL

- Simparica Trio- oral tablet, monthly, year round for heartworm, flea, and tick prevention.

Thank you for entrusting Sparky to our care.

Comprehensive Physical Exam

12/14/2020

History: Sparky presented today for overall itchiness. She also has a bald spot on her tail that owner reports has been there for a while now (since before itching started), has not gotten bigger. Every time you touch her back/rear end area, she goes crazy. This started a couple of months ago. Owner tried allergy chews but they did not help - hemp chews off Amazon. Sparky is not on any flea/tick prevention, but owner does not think it is fleas because her cats have not gotten any fleas. Sparky had allergies about a year ago, owner gave benadryl for a couple weeks in the spring. Owner thinks the Benadryl helped some, but didn't get rid of all itching. Owner switched to grain free food thinking that might, about a month and a half ago - Purina One Beef. Sparky was previously eating beef food from Purina One, but it was grain inclusive. Uses a scoop, thinks it is 1 cup twice daily. Very active.

Dispensed:

Item Description
 TRIO 44.1-88lbs EACH

Quantity Directions

6.00 Give 1 tablet orally once monthly YEAR ROUND for the prevention of Heartworms, intestinal parasites, Fleas, and Ticks.

Apoquel 16mg Tablets per pill

15.00 Give 1 tablet by mouth once daily (every 24 hours) for itch/allergies.

Recommendations:

1. Your dog's itchiness is due to an underlying allergy. There are three main categories of allergies in dogs: flea allergies, food allergies, and environmental/seasonal allergies (also known as atopic dermatitis). Some dogs are affected by more than one type of allergy. There is no cure for allergies - lifelong treatment will be needed to keep symptoms under control.

Flea allergies: Some dogs are actually allergic to flea saliva, and the bite of just one flea can set off a horrible allergic reaction. It is important that your dog be on year-round flea prevention from a veterinarian (most store bought products simply aren't effective). This is the easiest form of allergies to treat, so it would be awful to miss this diagnosis by not using flea prevention.

Food allergies: Food allergies cause non-seasonal (all year) itchiness and skin issues. Dogs with food allergies are usually allergic to the protein source in the food (i.e. chicken, beef, salmon, etc.). Grain allergies are actually rare in dogs. The only way to accurately diagnose a food allergy is to do a food trial. I do not feel this is necessary for Sparky at this time due to the seasonal nature of her allergies.

Atopic dermatitis (environmental/seasonal allergies): The diagnosis of environmental or seasonal allergies is a diagnosis of exclusion. This means we have ruled out fleas and food allergies as a possible cause. Dogs with atopic dermatitis have an abnormal skin barrier, so the skin is not able to protect itself from allergens in the environment. Because of this abnormal skin barrier and the itching, they often develop secondary infections, which makes them even more itchy. Atopic dermatitis requires lifelong treatment to control symptoms. There are many possible treatments, and we often use multiple methods to control their itch. For mildly affected dogs, antihistamines (such as Benadryl, Zyrtec, or Claritin) might be enough. For dogs that are really itchy, prescription allergy medications will be necessary. Frequent bathing with a medicated shampoo can be extremely helpful.

We are sending home a trial of Apoquel, which works well for most of our itchy patients. Let me know how she responds.

2. Sparky has gained a significant amount of weight since her annual visit. Please decrease her food intake by 30-40%. We discussed testing her thyroid level as the next step in ruling out a medical issue for weight gain. Let us know if you'd like to perform this test.

Thank you for entrusting **Sparky** to our care.

Dr. Britt DeNuzio

Immunizations Given:

Bordetella Oral ☒ **Injectable** ☐ **Performed** ☒ **Declined** ☐
H3N2/H3N8 1st of 2 ☒ **1 Year booster** ☐ LFL **Performed** ☒ **Declined** ☐
Influenza

Diagnostic Tests:

Fecal Flotation **Performed** ☐ **Prepaid container sent home** ☒ **Declined** ☐
Heartworm 4Dx Lyme/Ehrlichia/Anaplasma Test **Performed** ☒ **All negative!** **Declined** ☐

Recommendations:

- Sparky might feel a bit lethargic today and tomorrow from the immunizations. If you note multiple episodes of vomiting, profound weakness, facial swelling, and/or hives, these are NOT normal post vaccine reactions, and you should call us ASAP. If we are closed, please contact MedVet at 561-0069 or the CARE CENTER at 530-0911.
- Sparky is in good general health and is now current on an annual physical exam and immunizations. She will need to return in 3 weeks to have her influenza immunization boosted. This appointment can be with a technician.
- For parasite control, we recommend a combination of the following products be given life-long:
 - Interceptor Plus- oral tablet, monthly, year round for heartworm and intestinal parasite prevention
